Dear Shicheng,

This is a call for action. We need you to join other brilliant minds from academia, healthcare and industry, to create seismic shifts in the genomics landscape. If you revel in the power of genomics to unveil the mysteries of medicine then you belong at the [Festival of Genomics](#) this June 27-29 (Boston, MA) with your fellow Guardians of the Genome.

Whichever sector of the genomics industry you are from, across three 'Marvel-lous' days, packed with [12 focused streams](#), [10 workshops](#) and unique (and fun!) Festival floor [attractions](#), you could:

- Develop strategies for integrating **genomic data** into existing workflows
- Identify paths for faster and simpler diagnostic sequencing in the future
- Accelerate your **CRISPR** work
- Gain insight into unravelling **tumor heterogeneity**
- Learn to dissect complex tissue samples with **single cell analysis**
- Explore new techniques and technologies in **RNA seq**
- Discover how genomics is fast becoming part of the fabric of **drug development** - from forging a new breed of clinical trials to making epigenetic biomarkers count

Get your hands on the [Festival Guide](#) for a full overview of the streams.

Headlining supermen and women **Aubrey de Grey**, **Eric Schadt**, **Diana Bianchi**, **Heidi Rehm** and **George Church** join leading organizations including; **Genentech**, **Harvard Medical School**, **Boston Children's Hospital**, **Pfizer**, **ACMG**, **NASA**, **the FDA** and more to simplify the path to better healthcare through genomics.

We recognize that like every superhero, you have individual strengths and weaknesses but by combining forces we can overcome all foes. So, whether curiosity about chromosomes is your kryptonite, riddles of recessive genes are your puzzle, or disturbances in the data are your downfall we have talks and attractions to support and inspire you.

To answer the call, [download your mission brief](#) (Festival guide) now.

Best,

Laura Rae
